

İŞLETİM SİSTEMLERİ

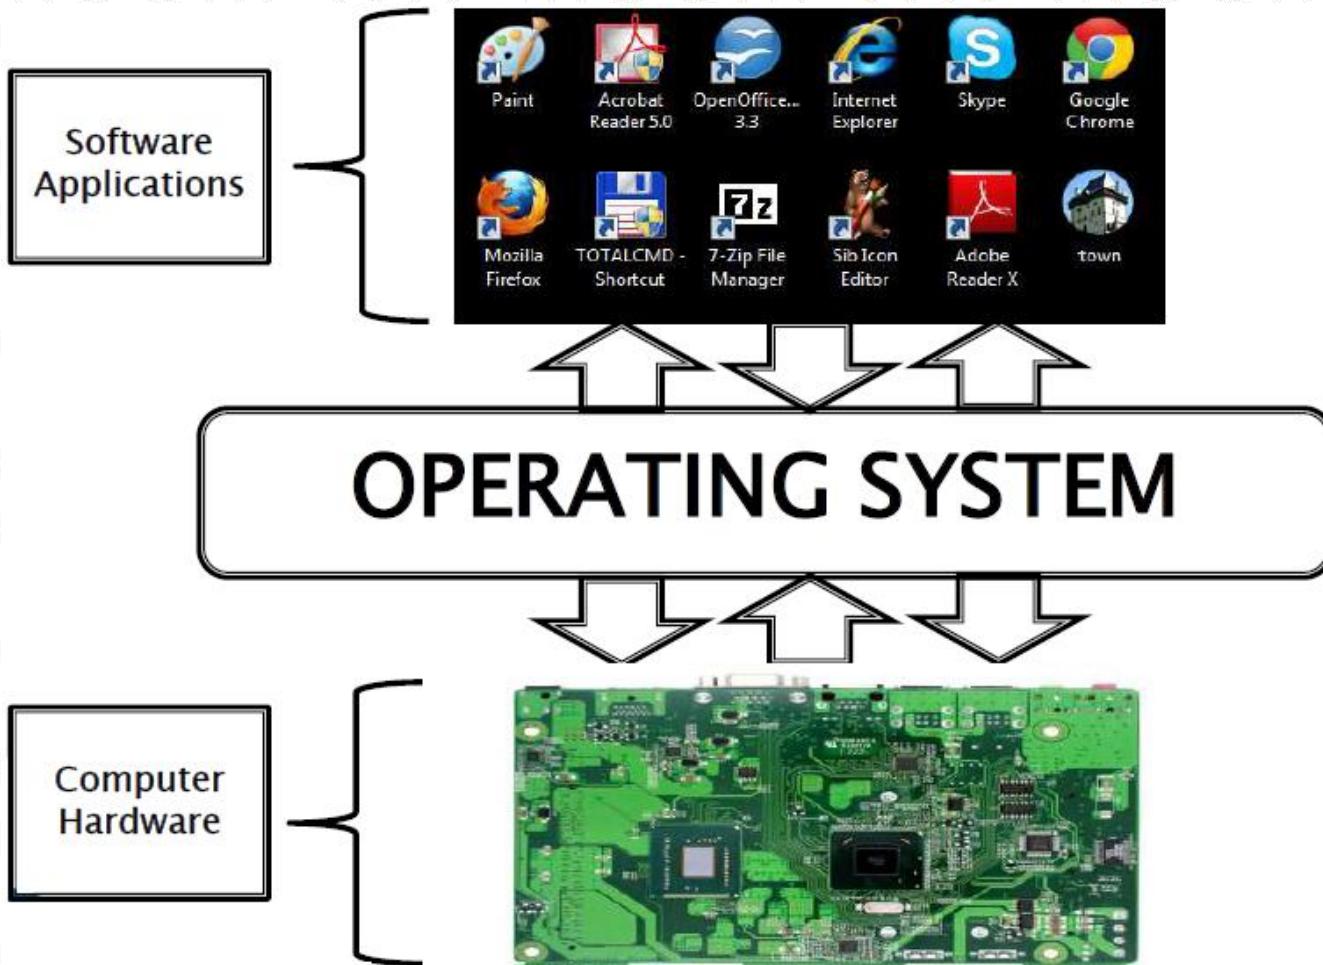

Dr. H. İrem TÜRKMEN

What is operating system?

- An operating system (OS) is a collection of software that manages computer hardware resources
- Without a computer operating system, a computer would be useless
- The operating system acts as a Interface Between the user and computer hardware

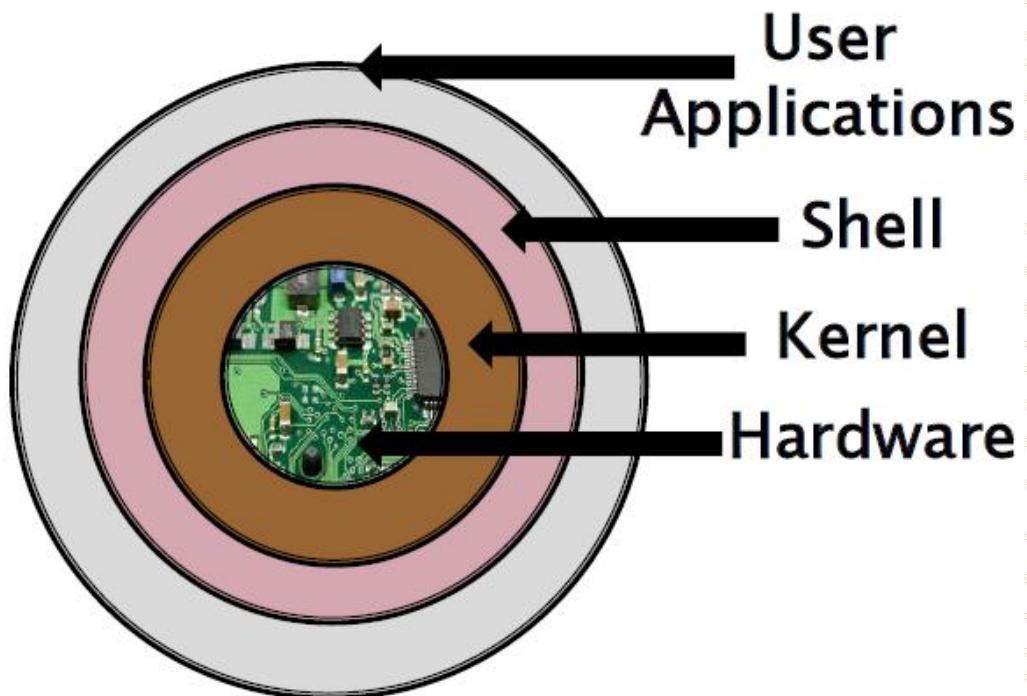

DEVICES THAT USE OS

- Computers
- Mobile phones
- Smart televisions
- Video game consoles
- ATM

Os Architecture

Operations Of OS

- Process Management
- Memory Management
- Network Management
- Device Management
- File Management
- Protection and Security

Process Manager

- Allocate resources to processes
- Enable processes to share and exchange information
- Protect the resources of each process from other processes
- Enable synchronisation among processes

Memory Manager

- Keeps track of the status of each memory location
- Determines how memory is allocated among competing processes, deciding which gets memory
- Tracks when memory is freed or unallocated and updates the status

Network Manager

- The network manager manages the relationship between the operating system and the network(s) that it is connected to.

Device Manager

- The device manager is responsible for detecting and managing devices
- Performing power management
- Device drivers allow user applications to communicate with a system's devices

File Manager

- Provides a user interface to manage files and folders
- Creating and deleting files and directories

Protection and Security

- A mechanism for controlling access of processes (or users) to resources defined by the OS
- A defense of the system against internal and external attacks (Denial-of-service, worms, viruses, identity theft, theft of service)

Types Of Operating System

- UI (Command-line / Graphical)
- Single/Multi User
- Single/Multi Tasking
- Single/Multi Processing

User Interface

- Command-line interface (CLI)

MSDOS
(MicroSoft Disk Operating System)

```
Installed at PS/2 port

Modules using memory below 1 MB:

      Name        Total        Conventional      Upper Memory
-----  -----  -----  -----
SYSTEM    16,784   (16K)    10,480   (10K)    6,304   (6K)
COMMAND   4,064    (4K)      0       (0K)    4,064   (4K)
UDVD2     2,000    (2K)      0       (0K)    2,000   (2K)
FDAPM     928     (1K)      0       (0K)    928     (1K)
CTMOUSE   3,104    (3K)      0       (0K)    3,104   (3K)
SHSUCDX   11,008   (11K)      0       (0K)   11,008   (11K)
Free      722,144  (705K)   643,552  (628K)  78,592  (77K)

      Drives Assigned
Drive  Driver   Unit
D:    FDCCD0001  0
2 drive(s) available.

Done processing startup files C:\NFDCONFIG.SYS and C:\AUTOEXEC.BAT

Type HELP to get support on commands and navigation.

Welcome to the FreedOS 1.2 operating system (http://www.freedos.org)
C:\>
```

User Interface

- GUI - Graphical User Interface

MULTI/SINGLE-USER OPERATING SYSTEMS

SINGLE USER

- Home computers
- Has one **user** at a time
- Windows 95
- **PalmOS (PDA)**

MULTI USER

- Known as network operating systems
- Allow access to the computer system by more than one user
- UNIX
- Windows Server XXX
- **Android 5.0(Lollipop) and up**

SINGLE/MULTI TASK OPERATING SYSTEMS

- SINGLE TASKING : Only one application window runs the thread in the background
 - Windows 3.1
 - Windows 95
- MULTI TASKING: Allowing multiple software processes to run at the same time.
 - Unix
 - Windows XP
 - Windows Vista

MULTI PROCESSING OPERATING SYSTEMS

- An operating system capable of supporting and utilizing more than one central processing units (CPU) within a single computer **system**.
- Linux
- Unix
- Windows 2000
